

From the home screen press and hold the  button and

say “DOWNLOADER”.

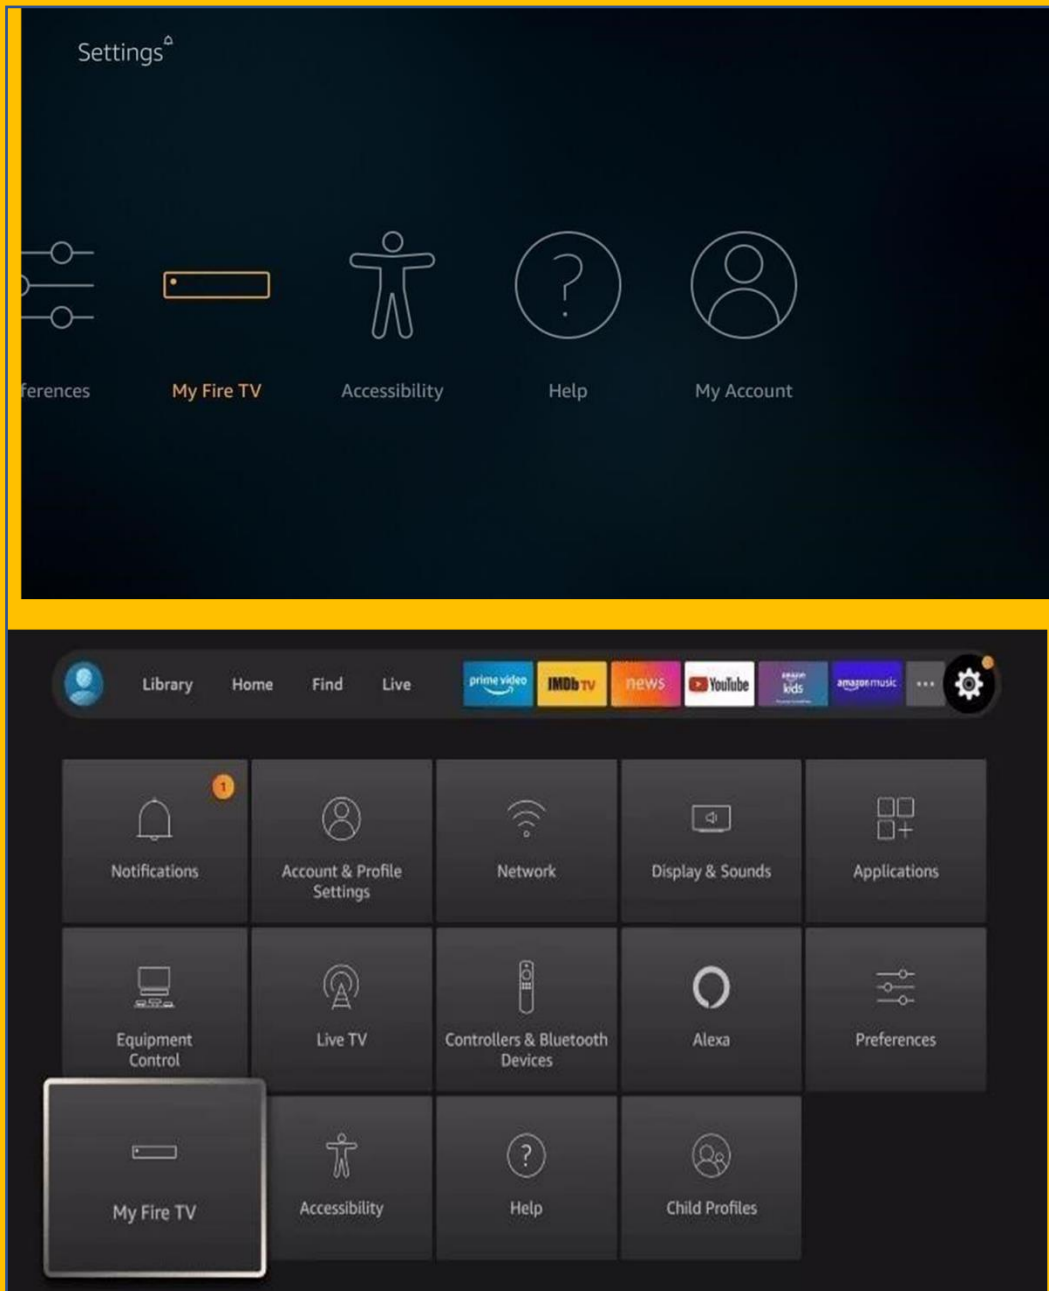

You should see this app on your firestick. Install it if you already haven't. But don't open the app.

Press the home screen button

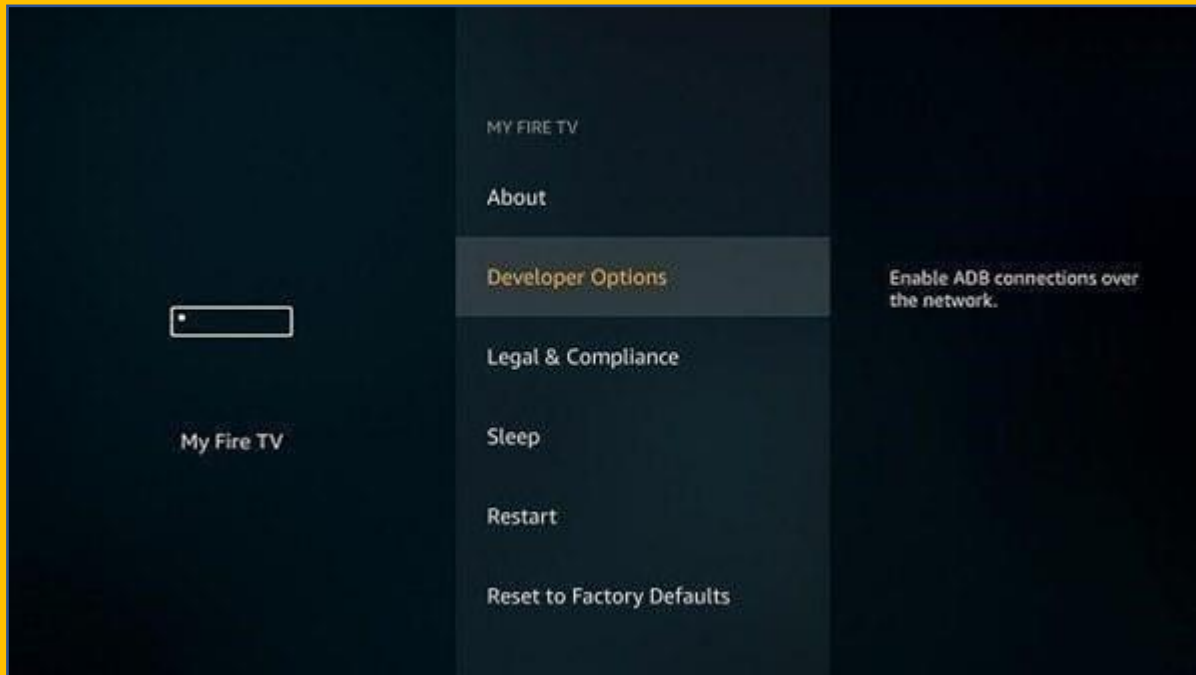

and go over to  settings.

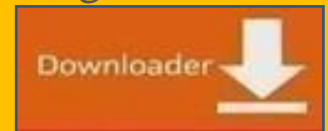

Next, scroll over to and select “My Fire TV”. (It may be listed as “Device” on older models.) And may look like either of the images below.

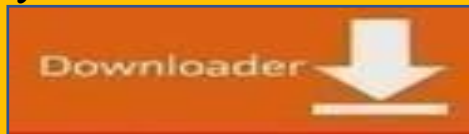

Next, scroll down and select “Developer options”.
If you do not see developer options hover over About and click OK 9 times. Then hit the back button and you will see developer options.

Then select “Apps from Unknown Sources” to turn the option to “ON”. If your device shows applications when you go there just look for this logo and turn it on.

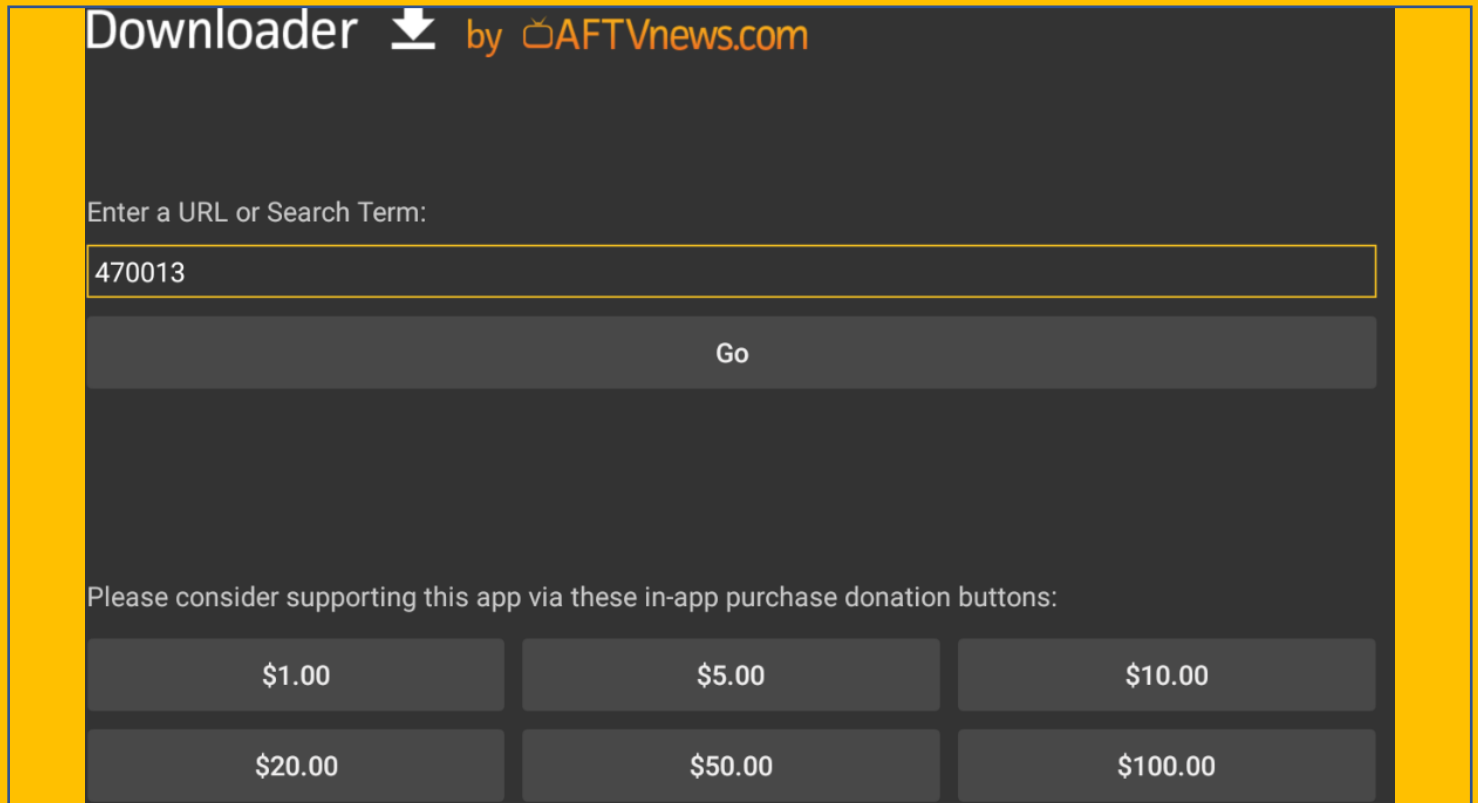

Now from here press and hold the  button once again and say “DOWNLOADER”. This time launch the app.

You will then enter the URLs and press Go and install the apps

[470013](#) Optimized for both mobile and TV!!
